Receipt is acknowledged of this nonprovisional Patent Application. It will be considered in its order and you will be notified as to the results of the examination. Be sure to provide the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION when inquiring about this application. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please write to the Application Processing Division's Customer Correction Branch within 10 days of receipt. Please provide a copy of the Filing Receipt with the changes noted thereon.

THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant : Ulrike Reeh et al.  
Appl. No. : 09/221,789  
Filed : December 28, 1998  
Title : Light-Radiating Semiconductor Component With A  
Luminescence Conversion Element  
Art Unit : 2871

LETTER

Hon. Commissioner of Patents and Trademarks,  
Washington, D.C. 20231

Sir:

Undersigned counsel has received the Filing Receipt for the above-identified application.

However, the title has been listed incorrectly and should be listed as:

**LIGHT-RADIATING SEMICONDUCTOR COMPONENT WITH A LUMINESCENCE  
CONVERSION ELEMENT**

It is respectfully requested that the Patent Office Records be changed and that a new Filing Receipt be issued, so that the printed patent will show the correct priority, inventor and continuing information.

Respectfully submitted,

For Applicant(s)

/jb

LIGHT-RADIATING SEMICONDUCTOR COMPONENT  
WITH A LUMINESCENCE CONVERSION ELEMENT

5

Cross-Reference to Related Application:

This is a continuation of copending International Application PCT/DE97/01337, filed June 26, 1997, which designated the United States.

10

Background of the Invention:

Field of the Invention:

The invention relates to a light-radiating semiconductor component with a semiconductor body that emits electromagnetic radiation during operation of the semiconductor component. The component has at least one first and at least one second electrical terminal, which are electrically connected to the semiconductor body. The component further has a luminescence conversion element with at least one luminescent material.

20

A semiconductor component of that type is disclosed, for example, in German published patent application DE 38 04 293. There, an arrangement having an electroluminescent or laser diode in which the entire emission spectrum radiated by the diode is shifted toward greater wavelengths by means of a plastic element that is treated with a fluorescent, light-
